## Euro Area: Macroeconomic Forecasts and Inflation

P. 3

"Economic growth in the euro area accelerated in the first quarter of 2016, reaching 0.6%, versus 0.4% in the previous quarter. Annual growth was 1.7%, which is 0.4 pp above our forecast.

The deviation from the forecast is due to the performance of the construction sector. The aggregate demand in the remaining sectors was close to the expected values. Qualitatively, growth in the euro area in the first quarter of 2016 was high, compared to averages since 2011. These growth figures are based on internal factors, as the export balance was negative.

Based on this information, along with up-to-date national accounts and the available high frequency indicators, the growth forecast for the euro area has been revised upwards by 0.4% to 1.5% ( $\pm 0.9$ ), for 2016 and by 0.2% to 1.4% ( $\pm 1.2$ ) for 2017."

## I. THE ECONOMY IN THE EURO AREA

**The GDP forecast for the euro area has been revised by 0.4% to 1.5% ( $\pm 0.9$ ) for 2016 and by 0.2% to 1.4% ( $\pm 1.7$ ) for 2017.**

**The IPI in the euro area rose by an annual rate of 2.2% in April, 0.6 pp below our forecast. The forecasts have been revised slightly downwards: 1.7% ( $\pm 1.8$ ) for 2016 and 1.2% ( $\pm 2.4$ ) for 2017.**

**The inflation forecast for 2016 in the euro area enters positive values, reaching 0.3% ( $\pm 0.28$ ) after the May figures.**

## I.1. MACROECONOMIC FORECASTS

Economic growth in the euro area accelerated in the first quarter of 2016, reaching 0.6%, versus 0.4% in the previous quarter. Annual growth was 1.7%, which is 0.4 pp above our forecast.

The deviation from the forecast is due to the performance of the construction sector. The aggregate demand in the remaining sectors was close to the expected values. Qualitatively, growth in the euro area in the first quarter of 2016 was high, compared to averages since 2011. These growth figures are based on internal factors, as the export balance was negative.

Concerning the forecasts for 2016 and 2017, we must highlight the following:

- The global growth forecast is less optimistic than at the beginning of 2016. The prediction is that Russia and Brazil will lose GDP, the USA will decelerate to a growth under 2.5% and China will only grow moderately, compared to the last decade, with 6.5%.
- Energy prices seem to have stopped falling, after reaching historical lows during the first quarter of 2016. This prediction forecasts an average price for BRENT crude oil of 45.37\$ in 2016 and 50.03\$ in 2017.
- Expansionary monetary policies will continue, with the ECB reference rate at 0% and the quantitative expansion programmes extended with regard to the values that they had at the beginning of the year.
- Exchange rates remain close to euro/dollar parity, and the forecast is that they will remain around 1.1 in 2016 and 2017.

Based on this information, along with up-to-date national accounts and the available high frequency indicators, the growth forecast for the euro area has been revised upwards by 0.4% to 1.5% ( $\pm 0.9$ ), for 2016 and by 0.2% to 1.4% ( $\pm 1.2$ ) for 2017.

The most significant changes are as follows:

The forecast for private consumption has been revised upwards by 0.5% for 2016 and 0.3% for 2017, to an annual value of 1.6% for 2016 and 1.2% for 2017. Retail and motor vehicle registrations performed significantly better than expected.

The forecast for gross fixed capital formation in 2017 has been revised upwards. For 2016, the forecast has been revised by 0.7% to an annual average of 2.8%. For 2017 the forecast has been revised upwards by 0.8% to 1.6%.

By sector, the construction sector presents the most optimistic forecast, with expected growth of 1.8% for 2016 and 0.5% for 2017, 1.8 pp and 1.6pp respectively above the April forecast. The

revision is almost entirely explained by the better-than-expected performance in the first quarter of 2016, because the associated indicators in the models present a similar evolution to that recorded in April, with a very low growth rate, in the region of 1.0%.

Following these changes, the forecast for domestic demand has been revised by 0.4% to 1.8 pp for 2016 and also by 0.4% to 1.3 pp in 2017.

The forecasts for exports have not changed significantly. The forecast for 2016 is -0.3% and for 2017 it is 0.1%.

Concerning monetary issues, annual inflation in the euro area was -0.1%, versus 0.1% in the previous month. The average annual forecast for 2016 is 0.3% ( $\pm 0.28$ ), 0.3% above the previous forecast. The forecast for core inflation has been revised upwards for the second month running, on this occasion owing to the evolution registered in the service sector. In addition, energy prices have continued along their previous trend, leading to a less negative contribution.

Concerning credit, the stock of credit for the private sector grew by an annual 1.1%, which is 0.1% less than in the previous month. Household credit increased by an annual 2.1%, which is 0.1% less than in the previous month, but the stock of credit for non-financial firms increased by 1.2%, 0.3% more than last month. On the other hand, the M3 aggregate rose by 4.9%, which is 0.3% more than in the previous month.

On 2 June the ECB Governing Council met, and no changes were made to the current intervention rates.

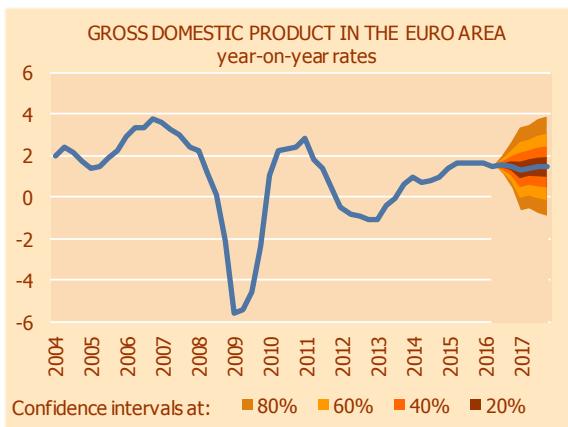

Inflation forecasts have been slightly revised upwards, but this brings no significant change to the medium term forecasts. The inflation forecast for two years hence is well under 1.5%. Therefore, monetary policies are not expected to change in the short term.

The top political risk at the present juncture is the outcome of the British decision to leave the EU, following the results of the referendum held on 23 June. At the moment, we don't have quantitative estimates of the impact of this decision on the GDP of the euro area in 2016-2017.

The most important consequences will result from the ongoing political processes. The exit of the UK will have an important effect on the future functioning of the EU and the monetary union. How, exactly, is yet unknown, but it seems unlikely that the end result will be greater political integration or larger domestic markets in the medium term.

## II.2. INFLATION

The monthly variation of the core PCE in May was 0.16%, versus the forecast 0.20%, with the annual rate rising from 1.58% to 1.62%. The department of commerce revised the data for previous months slightly downwards, and therefore the annual rate is far from our forecast 1.68%.

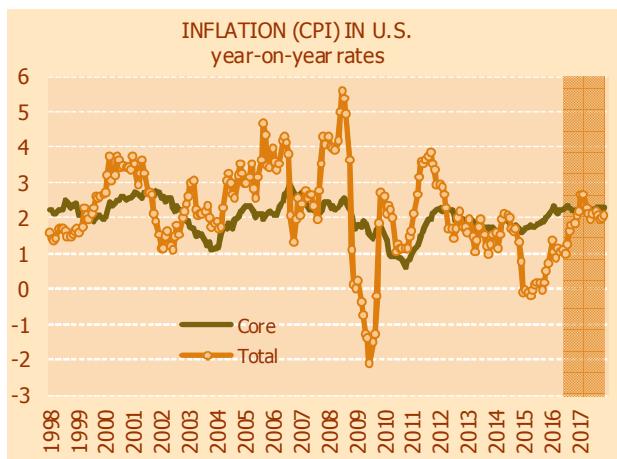

Concerning core inflation, the figures were higher than expected, with an increase of 0.15% versus the forecast 0.07%, with the annual rate rising from 2.15% to 2.24%.

By sector, services registered an important increase, largely explained by house rental prices which, as it is well known, have a relative weight on inflation of nearly 25%. Their high relative weight, their inertia and their close relationship with the economic cycle have a considerable effect on inflation expectations, which have been revised upwards. The annual rate of estimated rent of primary residence has risen from 3.14% to 3.26%, while actual rental prices have increased from

Graph II.2.1

Graph II.2.2

Source: BLS & BIAM (UC3M)  
This report: June 29, 2016  
Last report: May 31, 2016

3.73% to 3.80%.

Concerning industrial goods (not including energy), second hand cars sale prices, which are certainly volatile, have fallen.

Outside core inflation, the evolution of the remaining items was close to the forecast values, concerning food, gas, electricity and fuel prices.

With regards to the indicators that affect the CPI, comparing with the information from the previous report, oil prices were lower than expected after a series of consecutive rises, as were the prices of agricultural raw materials.

In terms of the core personal consumption expenditure index –core PCE<sup>1</sup>–, the forecast annual rate for June is 1.62%.

Our forecast for the core PCE has been revised slightly upwards owing to the increase in house rental prices, in the upper limit of the central interval estimated by the Fed in its last meeting.

Date: June 29, 2016

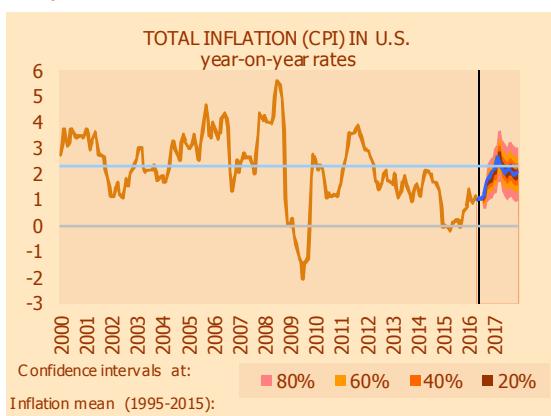

**Note:** These conclusions do not consider the April unemployment rate in the US, which was published after the report was completed. It would have probably represented an increase in our forecasts.

<sup>1</sup> Adjusted rates are used for the PCE and not seasonally adjusted for the CPI.

### III. SPAIN

**The production of intermediate goods in April pushed the IPI forecast up by 1 pp to 3.9% ( $\pm 1.1$ ) for 2016 and 0.4 pp to 3.7% ( $\pm 2.9$ ) for 2017.**

**The context of rising energy prices pushes the inflation forecast for 2016 up by 0.3% to -0.4% ( $\pm 0.43$ ).**

**Increase in social security contributors decelerated in May to an annual rate of 2.6%, which is compatible with a forecast annual average rise in employment of 2.9% for 2016.**

### III.1. MACROECONOMIC FORECASTS

During June, figures for May start becoming available, giving the first indications of Spain's economic performance in the second quarter of 2016.

Confidence indicators fell somewhat. The Sentiment Index edited by the European Commission fell by an average of 1.4 points in the second quarter, to 105.9. All the components present lower average figures. Significantly, consumer confidence fell by 1.2 to a quarterly average of -3.7. Industrial confidence also fell, by 1.3 to an average of -3.2.

Economic activity indicators show no clear signs of deceleration. Motor vehicle registrations, not corrected for seasonality, rose by a quarterly rate of 7.01%, significantly more than the 2.35% registered in the first quarter of 2016. Retail sales, corrected for calendar effect, deflated and not including service stations, fell by a quarterly rate of 0.49%, compared to 0.75% in the first quarter of 2016.

As for the main indicator on the supply side that we follow with greater detail, the Industrial Production Index, annual variation in April was an upwards surprise with 8.9% versus the forecast 6.0%.

IPI forecasts, therefore, have been revised upwards. The average annual rate has been revised by 1% to 3.9% ( $\pm 1.1$ ) for 2016 and 0.4 to 3.7% ( $\pm 2.9$ ) for 2017.

Concerning the labour market, the registration of social security contributors rose by an annual rate of 2.6%, which points to a slight deceleration compared to the 3.3% recorded in the last Active Population Survey, which recorded the performance of the labour market in Spain in the first quarter of 2016.

This evolution is compatible with our forecasts of a GDP growth of 0.5% ( $\pm 1.1$ ) between April and June. The publication of the next Active Population Survey on 28 July will lead to the reassessment of the macroeconomic scenario for Spain. The current forecast is an annual growth rate of 2.7% ( $\pm 0.8$ ) in 2016 and 2.0% ( $\pm 1.7$ ) in 2017.

## VI. ANNEX II: SUMMARY OF FORECASTS FOR DIFFERENT AREAS

### EURO AREA– U.S.

HOMOGENOUS INFLATION IN THE EURO AREA AND U.S.										
		Annual average rates								
EA: Weights 2014	USA: RI Dec 2014	2009	2010	2011	2012	2013	2014	2015	Forecasts	
TOTAL										
less Owner's equivalent rent of primary residence										
Euro area	100.0	0.3	1.6	2.7	2.5	1.4	0.4	0.0	0.3	1.3
U.S.	76.9	-1.0	2.2	3.8	2.1	1.3	1.3	-0.7	0.8	1.7
HOMOGENOUS CORE INFLATION										
- Non-energy industrial goods and Services, less Processed Food in the Euro area.										
- Non-energy industrial goods less Tobacco in U.S.										
- Services less Owner's equivalent rent of primary residence in U.S.										
Euro area	69.4	1.4	1.0	1.4	1.5	1.1	0.8	0.8	0.9	0.9
U.S.	56.8	1.4	1.2	1.8	2.1	1.6	1.4	1.4	1.8	1.7
COMPONENTS OF HOMOGENOUS CORE INFLATION										
Services less Owner's equivalent rent of primary residence										
Euro area	42.8	2.0	1.4	1.8	1.8	1.4	1.2	1.2	1.1	1.1
U.S.	36.4	2.0	1.6	2.2	2.7	2.5	3.5	3.3	3.6	3.1
Non-energy industrial goods less Tobacco										
Euro area	26.7	0.5	0.4	0.8	1.2	0.6	0.1	0.3	0.5	0.6
U.S.	20.4	0.5	0.7	1.2	1.2	-0.2	-0.5	-0.6	-0.5	-0.7
EXCLUDED COMPONENTS FROM HOMOGENOUS CORE INFLATION										
Food less Tobacco										
Euro area	17.4	0.2	0.5	2.4	2.8	2.5	0.1	0.7	0.9	1.0
U.S.	14.0	1.8	0.8	3.7	2.6	1.4	2.4	1.9	0.8	1.7
Energy										
Euro area	10.8	-8.1	7.4	11.9	7.6	0.6	-1.9	-6.8	-5.3	2.7
U.S.	6.8	-18.4	9.5	15.4	0.9	-0.7	-0.3	-16.7	-6.0	2.0

1. Excluding owner's equivalent rent of primary residence. 2. This homogeneous measure of core inflation does not coincide with the usual measure of core inflation for the euro area nor for the USA. It has been constructed in order to compare the data in the euro area and in the USA.

### A. MONTHLY REPORTS

<b>BIMA</b>	<i>Analysis and forecast of macroeconomic and labour market variables for Spain and the Euro Area. Inflation forecasts for Spain and the Euro Area. Debate / research articles written by in-house and external experts.</i>
<b>Diagnosis update service (Monthly reports)</b>	<i>Forecasts update service: 12 hours after the publication for the Spanish CPI, the Euro Area HCPI. Throughout the month for the macroeconomic forecasts and economic indicators for Spain and the Euro Area.</i>
<b>Consultancy service and support for research</b>	<i>Immediate access to the working papers developed within the Bulletin. Access to the Bulletin's data bank upon individual request. Consultancy service by BIAM experts on issues related to the Bulletin. Inclusion of the Collaborator Institution's logo in the Bulletin and in the website.</i>

### B. QUARTERLY REPORTS<sup>3</sup> ABOUT THE QUARTERLY GROWTH OF THE SPANISH CC.AA. AND OTHER SERVICES

Obtained by econometric models with composite leading indicators for each Spanish Region, which are used for quarterization and prediction of GDP for each region. The quarterly interpolations and predictions of each region are consistent with the average annual figure of each region. In addition, each quarterly GDP data for all regions are consistent with the corresponding national aggregate and all taking into account the nonlinear constraints imposed by chain indices.

<b>B1. Quarterly report about a specific CA</b>	<i>Quarterly Forecasts and comparative analysis with Spain and the Euro Area of annual and quarterly rates of GDP growth in one Spanish Region. Cyclic Analysis of growth profile and comparison of the chosen region with Spain and the Euro Area. Access to database of economic indicators for a specific region.</i>
<b>B2. Quarterly report about all CCAA</b>	<i>Quarterly Forecasts and comparative analysis with Spain and the Euro Area of annual and quarterly rates of GDP growth in all the Spanish Regions. Cyclic Analysis of growth profile and comparison of each region with Spain and the Euro Area. Access to database of economic indicators for a specific region.</i>
<b>B3. Access to the data set of economic indicators of one CCAA</b>	<i>Monthly update of a database of high-frequency indicators of economic activity covering the main economic sectors, including credit data and fiscal situation, for a specific region (about 15 monthly and quarterly indicators).</i>
<b>B4. Access to the data set of economic indicators of all CCAA</b>	<i>Monthly update of a database of high-frequency indicators of economic activity covering the main economic sectors, including credit data and fiscal situation, for all Spanish regions (about 255 monthly and quarterly indicators).</i>
