

Introduction to AGROVOC Concept Scheme

Fabrizio Celli - Office of Knowledge Exchange, Research and Extension
Food and Agriculture Organization of the UN

LOV symposium 18/06/2012

Outline

- ▶ AGROVOC Thesaurus
- ▶ AGROVOC Concept Scheme
- ▶ AGROVOC Linked Open Data
- ▶ VocBench

AGROVOC Thesaurus

- ▶ AGROVOC is a 30 years old multilingual vocabulary containing more than 40 000 concepts in 21 languages
- ▶ It covers topics related to food, nutrition, agriculture, fisheries, forestry, environment and related domains
- ▶ Its purpose is to standardize the indexing process to make searching simpler and more efficient
- ▶ AGROVOC is used by terminologists, librarians, researchers, AGRIS centers that index agricultural bibliographic resources
- ▶ A community of editors maintain AGROVOC using VocBench, a tool supporting SKOS and OWL that allows to edit concepts information, search concepts, exports data in SKOS

AGROVOC Concept Scheme

- ▶ SKOS (Simple Knowledge Organisation System) is a data model for representation of classification schemes, taxonomies, thesauri and every structured controlled vocabulary
- ▶ AGROVOC is a thesauri expressed as a concept scheme using SKOS
- ▶ The conversion from relational database to SKOS added semantics value to relationships

Structure of AGROVOC Concept Scheme

- ▶ Three levels of representation
- ▶ **Concepts** are the abstract meaning and globally identified using URIs. They build the actual structure of the concept scheme.
 - ▶ e.g. ‘maize’ in the sense of a cereal
- ▶ **Terms** are language-specific lexical forms attached to concepts. A concept is represented by all terms, preferred and non-preferred, in all languages, to which it is associated.
 - ▶ e.g. ‘maize’, ‘maïs’, ‘玉米’ , ‘ខោគុណ’
- ▶ **Term variants** are the range of forms that can occur for each term (spelling variants, abbreviations...)
 - ▶ e.g. ‘organization’ or ‘organisation’, ‘cow’ or ‘cows’

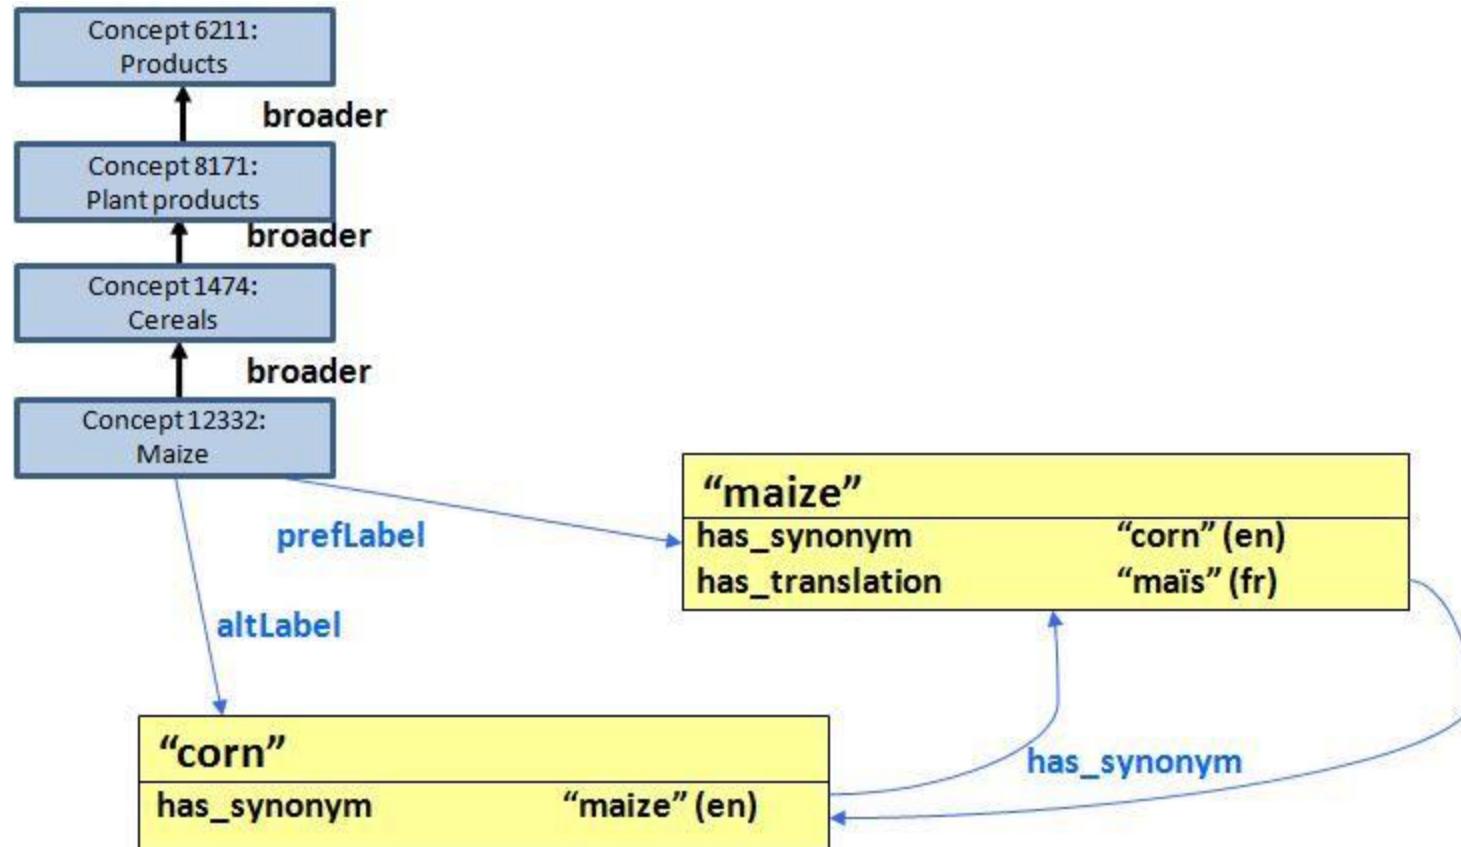

Inter-level relationships

- ▶ Used to associate concepts to terms and terms to strings
- ▶ **Concept-to-Term:** *has_lexicalization* (links concepts to their lexical realizations) links a concept to its language-dependent terms
 - ▶ (concept) rice has_lexicalization (English term) rice.
- ▶ **Term-to-String:** *has_acronym*, *has_spelling_variant*, *has_abbreviation* (link language-dependent terms to their variants)
 - ▶ European Union has_acronym EU

Intra-level relationships

- ▶ Used to associate concepts to concepts and terms to terms
- ▶ **Concept-to-Concept:** relates two different ideas, such as *has_subconcept*, *is_used_to_make*
 - ▶ cereals has_subconcept maize
 - ▶ maize is_used_to_make corn flour
- ▶ **Term-to-Term:** relates two terms that belong to the same concept, such as *has_synonym*, *has_scientific_name*
 - ▶ maize has_synonym corn
 - ▶ beetles has_scientific_name Coleoptera.

An AGROVOC fragment

AGROVOC Linked Open Data

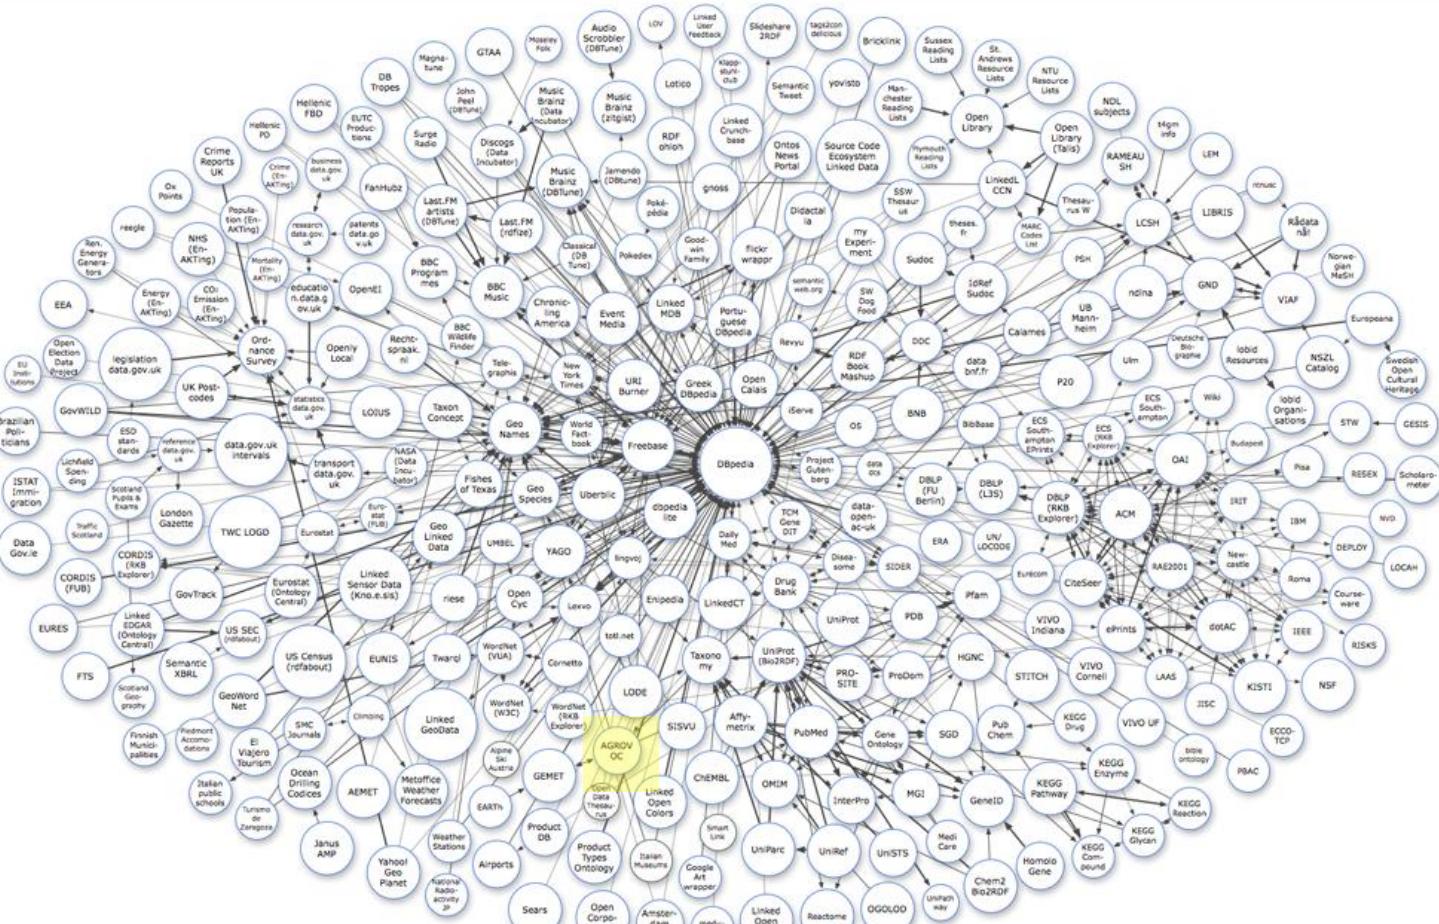

- ▶ AGROVOC is published in the Linked Open Data cloud
- ▶ It is aligned (i.e. linked) with 12 other vocabularies
- ▶ A sparql endpoint is available to query Agrovoc triples:
 - ▶ <http://agrovoc.mimos.my:55824/catalogs/performance/repositories/agrovoc>
- ▶ A modified version of the Pubby (<http://www4.wiwiss.fu-berlin.de/pubby/>) linked data front end is provided to allow URI dereferencing, i.e. to obtain the HTML or RDF description of a concept given its URI

AGROVOC Linked Open Data

- ▶ Each Agrovoc concept is uniquely identified by a URI, starting with the prefix <http://aims.fao.org/aos/agrovoc/>
- ▶ Relationships *skos:broader*, *skos:narrower*, *skos:related* link an AGROVOC concept to another AGROVOC concept
 - ▶ e.g. [agrovoc:c_12332](#) skos:narrower [agrovoc:c_14385](#)
- ▶ AGROVOC concepts are also linked to other external sources. An automatic tool extracts exact string matching, then manually checked to ensure correctness
 - ▶ e.g. the Agrovoc concept http://aims.fao.org/aos/agrovoc/c_12332 is linked to the EUROVOC concept <http://eurovoc.europa.eu/219871> by the predicate *skos:exactMatch* since both represent the same product *Maize*

About: Zea mays

An Entity of Type : plant, from Named Graph : <http://dbpedia.org>, within Data Space : dbpedia.org

Il mais è una pianta erbacea annuale della famiglia delle Poaceae, tribù delle Maydeae. È uno dei più importanti cereali largamente coltivati in climi temperate, in quest'ultimo caso a ciclo autunno-primaverile. Il mais rappresenta la base alimentare tradizionale nelle popolazioni dell'Asia, dell'Europa e del Nordamerica.

Property	Value
dbpedia-owl:abstract	<ul style="list-style-type: none">■ Mais - in Österreich auch Kukuruz - (<i>Zea mays</i>) ist eine Pflanzenart aus der Familie der Süßeinschläge (Poaceae). Sie ist eine C4-Pflanze, nutzt also einen anderen Grundtypus der Photosynthese als beispielhaft dargestellte. Weltwirtschaftlich bedeutend ist die kultivierte Unterart <i>Zea mays</i> subsp. <i>mays</i>, die als wichtigste Getreideart gilt. Deutet darauf hin, dass sich diese Unterart vor allem von <i>Zea mays</i> subsp. <i>parviflora</i> und anderen Teosinte-Typen (eine Formengruppe innerhalb der Gattung <i>Zea</i>) zur heutigen Form <i>Zea mays</i> subsp. <i>mexicana</i> zum mexikanischen Hochlandmais entwickelt hat. Es gibt ca. 5.000 verschiedene Maissorten (direkt oder über Produkte der Maisstärke) und als Futterpflanze für den Menschen wird Mais weltweit als Ausgangsprodukt für Biokraftstoffe, als Fermentationssubstrat, als Zierpflanze und als Maisöl produziert. Mais enthält weniger Faser als andere Getreidearten.■ <i>Zea mays</i>, comúnmente llamada maíz, choclo, millo o maíz amarillo. Actualmente, es el cereal con mayor volumen de producción en el mundo.■ Maisi (<i>Zea mays</i>) on viljelykasvi, joka on alkujaan Amerikan maija. Kasvaa yleensä yli 2,5-metriseksi, mutta pituuteen voi olla rajoitusta. Kehittyneet kukinnot, joissa siemenet ovat tasaisissa rihmilla. Kasvaa yleensä yli 2,5-metriseksi, mutta pituuteen voi olla rajoitusta. Kehittyneet kukinnot, joissa siemenet ovat tasaisissa rihmilla. Samaan aikaan kasvaa myös pienimuotoisia viljelyä varten. Maissista on myöhemmin kehitetty myös erilaisia sieniä ja lehtiä.■ Il mais è una pianta erbacea annuale della famiglia delle Poaceae, tribù delle Maydeae. È uno dei più importanti cereali largamente coltivati in climi temperate, in quest'ultimo caso a ciclo autunno-primaverile. Il mais rappresenta la base alimentare tradizionale nelle popolazioni dell'Asia, dell'Europa e del Nordamerica.

VocBench

- ▶ VocBench is a Web-based, multilingual, vocabulary editing tool developed by FAO
- ▶ It transforms thesauri, authority lists and glossaries into SKOS/RDF concept schemes for use in a linked data environment
- ▶ VocBench is a tool that allows maintaining AGROVOC and to keep it growing
- ▶ To explore the VocBench functionalities, use the [Sandbox](#). You can test editor functionalities by using the guest login

VocBench

VERSION 1.1

Welcome to the VocBench

The VocBench manages concepts and terms in AGROVOC, FAO's agricultural thesaurus, and supports its evolution to an ontology.

[Learn more about the VocBench](#)

You must log in or create an account to use the VocBench.

 This site is optimized for following browsers:  Safari  Google Chrome  Mozilla Firefox

What's new

- The VocBench Web Services Beta version has been released for developers of agricultural information management systems to incorporate the VocBench into their applications via web services.

Export

This screenshot shows the 'Export' section of the VocBench 1.1 application. At the top, there's a search bar with 'Exact word' and 'Advanced search' buttons. Below the search bar is a navigation menu with links for 'Recent changes', 'Concepts', 'Relationships', 'Validation', 'Export' (which is currently selected), and 'Statistics'. To the right of the menu are 'Concept navigation history' and 'Content language' buttons. The main area is titled 'Export' and features a 'Select export language' button with a globe icon. Below this are three rows of filter options: 'Format' (dropdown menu), 'Classification' (dropdown menu), 'Concept' (dropdown menu with a 'Browse' button and a checkbox for 'Include children'), and 'Date' (dropdown menu for 'Create' or 'From', 'To' date input field, 'Term code' dropdown, and 'Browse' button). At the bottom of the export section are 'Preview' and 'Clear' buttons. A large 'Preview' area is visible below the filters, and an 'Export' button is located at the bottom right of this area.
