Euro Area: Macroeconomic Forecasts and Inflation

P. 3

"The euro area growth rate in the fourth quarter of 2015 was 0.3%, 0.2 pp below our forecast. The annual rate was 1.7%. As a result, the average annual GDP growth rate was 1.6%, the same as in 2014.

The downwards surprise was due to a greater than expected negative contribution from the foreign sector. Exports grew by 0.3 pp less than forecast, to 0.2%, while imports grew by 0.2 pp more than expected, to 0.9%. In all, this led to a contribution of -0.3 points from the foreign sector, when the forecast was close to zero.

Private consumption was another cause of the downwards surprise, as it grew by 0.2% in the quarter instead of the forecast 0.4%.

Public consumption grew by a quarterly rate of 0.6%, much more than the forecast 0.1%. There were also greater than expected increases in Construction and Capital Goods, 1.1% and 2.0%, respectively, versus -0.3% and 0.2%.

Qualitatively speaking, economic growth was low in the euro area in the fourth quarter of 2015. Secondly, the governments played a significant role, as shown by the rise in public consumption and, although not entirely, the increase in non-residential construction. Thirdly, the lower growth rate found in emerging economies affected exports more than lower oil prices in private consumption. The net effect of the international setting appears to have been negative for the euro area in the second half of 2015."

I. THE ECONOMY IN THE EURO AREA

The growth forecast for the euro area has fallen by 0.3 pp for 2016 to 1.1% (± 0.9). For 2017 it is 1.2% (± 1.6).

The euro area IPI presented an upwards innovation of 4 points in January, with an annual rate of 2.8%. The forecasts are 2.1% (± 2.0) for 2016 and 1.2% (± 2.7) for 2017.

Core inflation in February represented a downwards surprise in the euro area due to services.

I.1. MACROECONOMIC FORECASTS

The euro area growth rate in the fourth quarter of 2015 was 0.3%, 0.2 pp below our forecast. The annual rate was 1.7%. As a result, the average annual GDP growth rate was 1.6%, the same as in 2014.

The downwards surprise was due to a greater than expected negative contribution from the foreign sector. Exports grew by 0.3 pp less than forecast, to 0.2%, while imports grew by 0.2 pp more than expected, to 0.9%. In all, this led to a contribution of -0.3 points from the foreign sector, when the forecast was close to zero.

Private consumption was another cause of the downwards surprise, as it grew by 0.2% in the quarter instead of the forecast 0.4%.

Public consumption grew by a quarterly rate of 0.6%, much more than the forecast 0.1%. There were also greater than expected increases in Construction and Capital Goods, 1.1% and 2.0%, respectively, versus -0.3% and 0.2%.

Qualitatively speaking, economic growth was low in the euro area in the fourth quarter of 2015. Secondly, the governments involved played a significant role, as shown by the rise in public consumption and, although not entirely, the increase in non-residential construction. Thirdly, the lower growth rate found in emerging economies affected exports more than lower oil prices in private consumption. The net effect of the international setting appears to have been negative for the euro area in the second half of 2015.

The growth perspectives for the euro area have been updated with the national accounts and available indicators. The result is a decrease of 0.3 pp to 1.1% (± 0.9) in the growth estimated for 2016, with a forecast of 1.2% (± 1.6) growth in 2017.

The revision of the components was primarily affected by the sign of the surprise in the fourth quarter, which had a greater impact than the evolution of the associated indicators.

On the demand side, the forecast for private consumption has been revised downwards by 0.3 pp, to an average annual rate of 1.1% for 2016. Growth in public consumption is also revised downwards, but by just 0.1 pp, to 1.3%.

The forecast for investment has increased for 2016. Overall, the estimated growth rate has doubled to an average annual rate of 2.1%. Regarding the source of this improvement, capital goods show greater growth, 3.1 points more than previously estimated for 2016, to 4.4%. Construction presents a relative improvement as, even with a forecast of 0.0, it is better than the -1.5% average annual rate calculated in previous forecasts. Other investments, however, which include cultivated and intellectual property assets, will grow by 0.3 pp less in 2016, 4.0%.

The net effect of these two dynamics on the growth forecast for domestic demand is neutral. The previous forecast of 1.4 pp remains unaltered. This implies that domestic demand will fall, as it contributed 1.7 pp to growth in 2015.

The revision to the foreign demand forecast has the greatest impact on the decline of the scenario. Exports are expected to grow by 0.4 pp less in 2016, 2.7%. Imports, however, slightly increase their growth forecast for 2016, by 0.1 pp to 3.6%. This is primarily due to the improved forecast for capital investment.

Overall, the foreign sector's contribution in 2016 is clearly negative in this macroeconomic scenario. It reduces annual growth by 0.3 pp, instead of the neutral 0.0 pp calculated in the previous forecast. This increases the 0.2 pp that the foreign sector drained from euro area growth in 2015.

Regarding the first quarter of 2016, the current forecasts show quarterly growth of 0.2%, less than the observed 0.3%.

In qualitative terms, 2016 is currently expected to present low growth. Considering that the expected inflation scenario is far from the ECB's target, our estimated average growth of the euro CPI in 2016 is 0.0% (± 0.48).

On the other hand, on March 10th the ECB announced new expansionary measures after its monetary policy meeting. Firstly, the main interest rates were reduced: the deposit rate by 0.1 pp to -0.4%, the rate applicable to main financing operations by 0.05 pp to 0.00%, and the marginal credit facility rate by 0.05 pp to 0.25%.

Regarding unconventional liquidity measures, it was decided to increase the average monthly

balance of operations from 60,000 to 80,000 million euros. This will be done by increasing the PSPP programme in both quantity and admissible assets, specifically bonds in euros classified as investments issued by firms not belonging to the banking sector established in the euro area. The PSPP programme, which started in March 2015, is for public equity and presented a balance of 643,300 million in March 2016, with an average weekly increase of 12,675 million so far this year.

Regarding the other two most important unconventional programmes, CBPP3 (Covered Bonds), which started in November 2014, increased its balance to 165,700 million euros in March, growing by a weekly average of 1,700 million euros so far this year. On the other hand, the ABSPP (Asset Backed Securities) programme, which also started in November 2014, reached a total volume of 19,300 million in the same period, with an average weekly increase in 2016 of 300 million euros.

Finally, the ECB decided to provide the banking system with a targeted longer-term refinancing round, known as TLTRO. It will start in June, with quarterly issues up to March 2017. The interest rate could be as low as the 0.0% applied to financing operations after the last meeting. The amount of the issues has not yet been specified.

Annual inflation in the euro area in February was -0.2%, having fallen by 0.5 pp since January. As well as the context of low energy prices, core

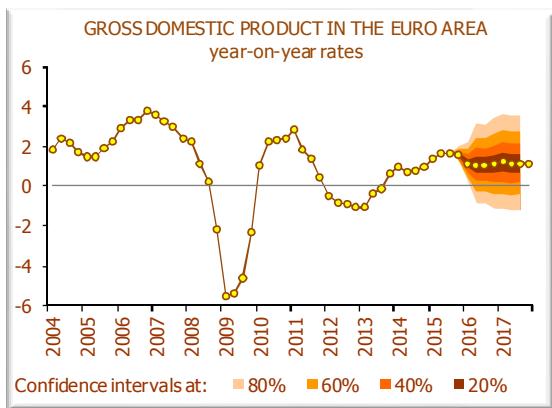

inflation presented a negative innovation due to services. The inflation expectations for 2016 are 0.0% (± 0.49).

The surprise in service inflation is in line with the credit and monetary supply figured for February. Growth is very slight so far.

The stock of credit to the private sector in the euro area increased by 1.1% relative to a year earlier. This represents 0.3pp growth since January. Household credit grew by 2.2%, 0.3 pp more than in January, while credit for non-financial firms grew by a year-on-year rate of 0.6% in 2015. The MS aggregate grew by 5.0%, the same as in January.

The ECB is exclusively aimed at controlling euro area inflation, which should remain "below but close to 2%". The current inflation forecasts alone would justify this intensification of expansionary policies. If we consider the relatively low growth of the GDP, this would only reinforce the arguments in favour of an intervention of this kind.

II. UNITED STATES

II.1. INDUSTRIAL PRODUCTION INDEX

The February figure is a downwards surprise, with negative figures confirmed when a change of trend was expected.

The average annual growth forecasts have fallen by 1.1 pp to 0.0% in 2016 and 2.1 pp to 0.7% in 2017.

II.2. INFLATION

As mentioned in the report on the CPI, core inflation was greater than expected, with a 0.47% monthly increase instead of the forecast 0.36%; the annual rate rose from 2.21% to 2.33%.

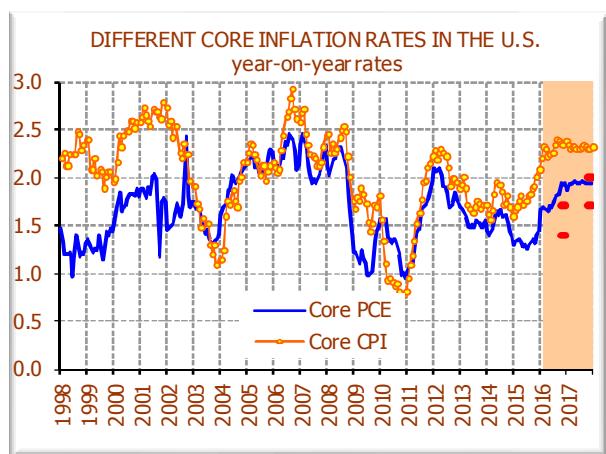

By group, services registered a monthly increase of 0.37% versus the expected 0.31%, and the annual rate rose from 2.97% to 3.08%. With regards to non-energy industrial goods, the monthly variation was 0.78% versus the expected 0.51%, and the annual rate went from -0.10% to 0.07%.

In core inflation, there were upwards innovations in non-durable non-energy goods and in medical services.

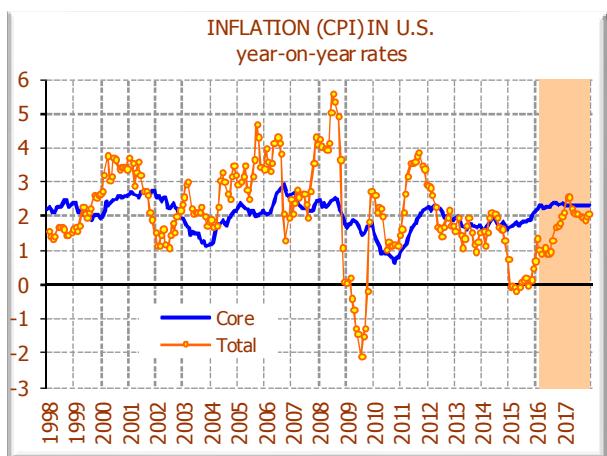

The evolution of the items outside core inflation was much as expected.

Regarding the indicators that affect the CPI, compared with the information available up to the

Graph II.2.1

Graph II.2.2

Source: BLS & BIAM (UC3M)

This report: March 28, 2016

Last report: February 26, 2016

end of February, we see a slight increase in prices of agricultural raw materials and crude oil. On the other hand, there was a significant upwards deviation in the import and production prices of non-durable, non-energy goods.

Considering all the new available information, the core inflation and CPI forecast rise slightly, albeit only for the short term, for the second consecutive month.

Note that in the PCE, the prices of medical services were more moderate than expected. On the other hand, with no apparent justification, we find a sharp drop in service prices for US residents.

In terms of the core personal consumption expenditure index –core PCE¹–, we are forecasting an annual rate for February of 1.67%.

The core PCE forecasts fall slightly, but are still above the central interval estimated by the Fed for 2016 and in the middle of that interval for 2017².

Date: March 28, 2016

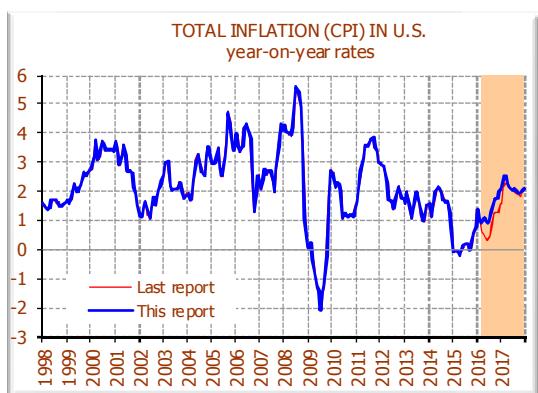

Note: These conclusions do not consider the April unemployment rate in the US, which was published after the report was completed. It would have probably represented an increase in our forecasts.

¹ Adjusted rates are used for the PCE and not seasonally adjusted for the CPI.

Date: March 28, 2016

The Spanish GDP growth forecasts are 2.9% (± 1.1) for 2016 and 2.1% (± 1.7) for 2017.

The January IPI represented a downwards surprise, as it fell when a slight increase was expected. The forecasts are 2.3% (± 1.4) for 2016 and 2.2% (± 3.0) for 2017.

In February, fuel and electric prices took the average inflation forecast for 2016 to -0.9% (± 0.74). Every month will present an annual rate below zero.

III.1. MACROECONOMIC FORECASTS

With the information available in March, we now have a rough idea of the first quarter of 2016. Figures have been published up to February for very significant aspects such as confidence, consumption indicators and, more important still, the labour market. Taken together, the information suggests a slower growth rate for domestic demand. A clear forecast cannot be obtained for net exports, as only the January figure is available.

Starting with the confidence indicators, also capable of anticipating future evolution in the short term, the Economic Sentiment Index edited by the European Commission fell by an average of 2.1 points in the first quarter, to a total of 107.6. All the components show lower average figures. Note the reduction in confidence in Construction, which fell by 4.6 points to -26.3. Secondly, there was a 2.8-point reduction in consumer confidence, to a quarterly average of -1.2. Industrial confidence registered a similar reduction, 2.3 points to -2.0. Confidence in the retail trade and other services fell by a smaller amount, 0.4 and 1.6 pp, respectively, to an average of 15.6 and 18.6. The uncertainty regarding whether a government will finally be formed or new general elections have to be convened could be associated to this scenario.

It is appropriate to complete the information about confidence with an effective economic activity indicator. There is information about private consumption. In this case, examining new car registrations, corrected for seasonality, we find a quarterly growth rate of 2.4%, much lower than the 4.5% registered in the last quarter of 2015. The same is found in the retail trade index, corrected for calendar effect, deflated and not including petrol stations: the quarterly rate of variation is 0.6% versus the 0.9% observed in the fourth quarter of 2015. In this case, however, only the January figure is available.

The impression of sluggishness is to a point confirmed by the Social Security contributor figures. Regarding annual rates, the growth rate fell by 0.2 pp in the first quarter of 2016, although it is still 3.0%. The forecast based on the APS figure shows a 2.6% rate of growth in occupation in the first quarter, also 0.2 pp less than in the last quarter of 2015. The first two months of the year, especially February, showed a significant change in the perspectives for 2016 that are discussed in more detail in the SPAIN: Labour Market section.

As for the main indicator on the supply side that we follow, for the Industrial Production Index, not corrected for seasonality or calendar effect, the only information available is for January. The year-on-year variation in that month was a strong downwards surprise, as it was only 0.6% versus the forecast 2.2%. The responsible economic

destinations were intermediate goods and energy.

Having updated our models with the new information, the IPI forecasts fall from those obtained with the December 2015 figures 2015. The average annual growth rate expected for 2016 is revised downwards by 1.0 pp to 2.3% (± 2.0) and the 2017 forecast falls by 0.6 pp to 2.2% (± 3.0). The forecast for 2018 is 0.7% (± 3.0).

Usually, as we updated the Spanish GDP growth forecast last month, we would not update again this month. However, the new weights from 2015 in the demand aggregates and activity branches for the different components of the GDP have generated a 0.1 pp increase in the average annual Spanish GDP forecast for 2016, to 2.9% (± 1.1). This change was not significant to one decimal point in the expected quarterly rates of variation, and 0.6% (± 0.8) is maintained for the first three months of this year.

In all, this small change is not important, as the next Bulletin will have the APS for the first quarter of 2016, with which we will recalculate the employment and private consumption forecasts for the entire forecasting horizon. If the trend found in the indicators is confirmed, together with the slower evolution of the labour market, a downwards revision is likely in the current forecast.

VI. ANNEX II: SUMMARY OF FORECASTS FOR DIFFERENT AREAS

EURO AREA– U.S.

HOMOGENOUS INFLATION IN THE EURO AREA AND U.S.										
Annual average rates										
EA: Weights 2014	2009	2010	2011	2012	2013	2014	2015	Forecasts		
USA: RI Dec 2014	2009	2010	2011	2012	2013	2014	2015	2016	2017	
TOTAL										
less Owner's equivalent rent of primary residence										
Euro area	100.0	0.3	1.6	2.7	2.5	1.4	0.4	0.0	0.0	1.1
U.S.	77.5	-1.0	2.2	3.8	2.1	1.3	1.3	-0.7	0.1	1.6
HOMOGENOUS CORE INFLATION										
- Non-energy Industrial goods and Services, less Processed Food in the Euro area.										
- Non-energy industrial goods less Tobacco in U.S.										
- Services less Owner's equivalent rent of primary residence in U.S.										
Euro area	69.4	1.4	1.0	1.4	1.5	1.1	0.8	0.8	0.8	0.8
U.S.	55.2	1.4	1.2	1.8	2.1	1.6	1.4	1.4	1.6	1.7
COMPONENTS OF HOMOGENOUS CORE INFLATION										
Services less Owner's equivalent rent of primary residence										
Euro area	42.8	2.0	1.4	1.8	1.8	1.4	1.2	1.2	0.9	1.0
U.S.	34.8	2.0	1.6	2.2	2.7	2.5	3.5	3.3	3.6	3.1
Non-energy industrial goods less Tobacco										
Euro area	26.7	0.5	0.4	0.8	1.2	0.6	0.1	0.3	0.5	0.5
U.S.	20.4	0.5	0.7	1.2	1.2	-0.2	-0.5	-0.6	-0.7	-0.6
EXCLUDED COMPONENTS FROM HOMOGENOUS CORE INFLATION										
Food less Tobacco										
Euro area	17.4	0.2	0.5	2.4	2.8	2.5	0.1	0.7	0.5	0.6
U.S.	13.9	1.8	0.8	3.7	2.6	1.4	2.4	1.9	0.8	1.7
Energy										
Euro area	10.8	-8.1	7.4	11.9	7.6	0.6	-1.9	-6.8	-6.7	2.2
U.S.	9.0	-18.4	9.5	15.4	0.9	-0.7	-0.3	-16.7	-12.5	0.5

- Excluding owner's equivalent rent of primary residence.
- This homogeneous measure of core inflation does not coincide with the usual measure of core inflation for the euro area nor for the USA. It has been constructed in order to compare the data in the euro area and in the USA.

BIMA	<i>Analysis and forecast of macroeconomic and labour market variables for Spain and the Euro Area. Inflation forecasts for Spain and the Euro Area. Debate / research articles written by in-house and external experts.</i>
Diagnosis update service (Monthly reports)	<i>Forecasts update service: 12 hours after the publication for the Spanish CPI, the Euro Area HCPI. Throughout the month for the macroeconomic forecasts and economic indicators for Spain and the Euro Area.</i>
Consultancy service and support for research	<i>Immediate access to the working papers developed within the Bulletin. Access to the Bulletin's data bank upon individual request. Consultancy service by BIAM experts on issues related to the Bulletin. Inclusion of the Collaborator Institution's logo in the Bulletin and in the website.</i>

B. QUARTERLY REPORTS³ ABOUT THE QUARTERLY GROWTH OF THE SPANISH CC.AA. AND OTHER SERVICES

Obtained by econometric models with composite leading indicators for each Spanish Region, which are used for quarterization and prediction of GDP for each region. The quarterly interpolations and predictions of each region are consistent with the average annual figure of each region. In addition, each quarterly GDP data for all regions are consistent with the correspondent national aggregate and all taking into account the nonlinear constraints imposed by chain indices.

B1. Quarterly report about a specific CA	<i>Quarterly Forecasts and comparative analysis with Spain and the Euro Area of annual and quarterly rates of GDP growth in one Spanish Region. Cyclic Analysis of growth profile and comparison of the chosen region with Spain and the Euro Area. Access to database of economic indicators for a specific region.</i>
B2. Quarterly report about all CCAA	<i>Quarterly Forecasts and comparative analysis with Spain and the Euro Area of annual and quarterly rates of GDP growth in all the Spanish Regions. Cyclic Analysis of growth profile and comparison of each region with Spain and the Euro Area. Access to database of economic indicators for a specific region.</i>
B3. Access to the data set of economic indicators of one CCAA	<i>Monthly update of a database of high-frequency indicators of economic activity covering the main economic sectors, including credit data and fiscal situation, for a specific region (about 15 monthly and quarterly indicators).</i>
B4. Access to the data set of economic indicators of all CCAA	<i>Monthly update of a database of high-frequency indicators of economic activity covering the main economic sectors, including credit data and fiscal situation, for all Spanish regions (about 255 monthly and quarterly indicators).</i>
